# Cardinal Recycling

## We Buy

- Scrap Metals
- Copper
- Aluminum
- Brass

Commercial recycling of all types of commodities

## Cardinal Recycling has custom programs to fit your commercial and individual needs

Welcome to Cardinal Recycling. We are a recycling and material management company specializing in the processing and recycling of scrap metal, copper, aluminum, brass and other materials. We help business reduce their waste through tailored collection systems.

We are conversant with industrial expectations of providing customer-oriented services.

We focus on the customers that everyone else has ignored. Accounts that generate 1000 lb of recyclables or more

First how we got started and what we still do is service the small generators of recyclables. We have four ways of collecting recyclables.

## Services

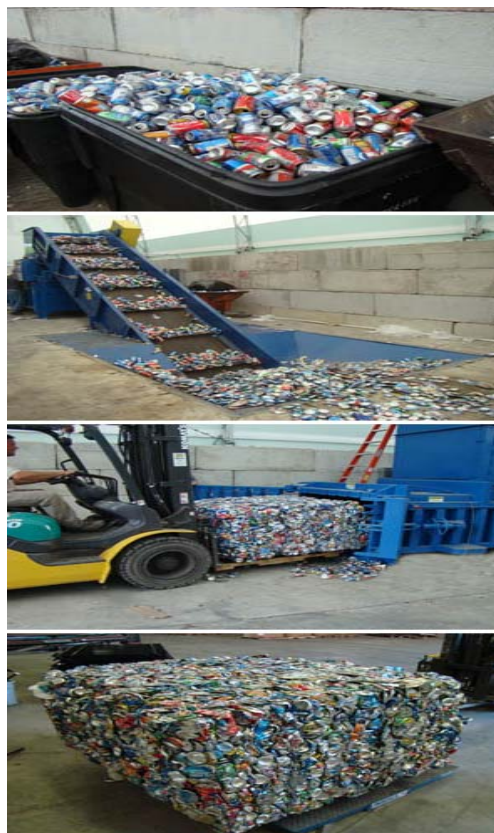

For example today September 28<sup>th</sup> is our Aurora route which we run every Friday. We will make seven stops one account will have 3000 lb of plastic the next stop will have 7,000 lb of cardboard the next stop will have 1200 lb of aluminum etc.

The next part of our business is the movement of large quantities of materials for example an account who we will stage a trailer for them and by there material from the in large quantities.

The third part of our business is a retail recycling center where people will bring in their recyclables and we will pay them on the spot. For example aluminum cans, copper, brass, stainless steel etc.

The fourth part of our business we are a processor of material where recycling trucks such as allied waste will bring in cardboard in large quantizes loose and will dump it on our conveyer system which will then feed into a baler which will make 1,300 lb bales of cardboard. We bale a whole variety of material ranging from aluminum cans to five gallon water bottles to papers of all grades.

We also do aluminum can and paper drives at schools and churches. We also do X-ray film recycling for hospitals and clinics
